February 2019- Bactronix Tips and Advice

Did You Ever Have Your Home Tested for Airborne Pollutants, Harmful Bacteria and Mold?

You would be shocked at the contaminants both in the air you are breathing, and on every surface you are touching.....despite your great efforts to keep your home "clean" and safe for your family.

So, how safe is your home? Are you going to take the time and read all the guidelines according to the EPA and the CPSC (Consumer Product Safety Commission)?

Your best solution is to call the experts of Bactronix. The Bactronix system for protecting your home against harmful microorganisms begins with our team of Certified Specialists and Certified Technicians. Based on the test results (the levels of actual contamination), they know and understand how to effectively apply the BactroKill and BactroBlock products. Our specialists and technicians understand surface contamination and how to inhibit the growth of harmful microorganisms in homes and businesses.

The Bactronizing Process to create healthy homes consists of the following steps:

1. Inspection and Testing.

We use state of the art testing equipment and methods to determine the level of harmful microbes. This provides a report for the treatment protocols.

2. Certified Filtration

Before we treat any surface, we test the air and the HVAC filter system.

3. Step One of the Bactronizing Process

BactroKill is an Eco Friendly, EPA registered Hospital Grade Disinfectant. BactroKill has the highest level of microbial kill. (99.999% kill rate of all harmful microorganisms in 60 seconds). To assure 100% of coverage on all surfaces, the BactroKill product is applied through a patented electrostatic spray process.

4. Step Two of the Bactronizing Process

BactroBlock is a protectant that offers long term residual. Through the most effective electrostatic spray process, our certified technicians applies step two which provides persistent, continuous antimicrobial protection that inhibits the growth of harmful bacteria, mold mildew and other known microorganisms.

5. Replace the HVAC filter and treat

The Bactronizing Process will provide an ongoing kill to the microorganisms that pass through the filter chamber. It will also help neutralize the musty smell coming from your HVAC system. While treating the home, we also include treatment of the ducts and filter from the HVAC system.

6. Maintenance System.

Our certified Specialists will show you how to use BactroKill on an ongoing basis to disinfect the most contaminated frequent touch points in your home. After the house has been treated by Bactronix, this maintenance process will help you to keep the contamination levels under control.

7. Final Testing and Certification.

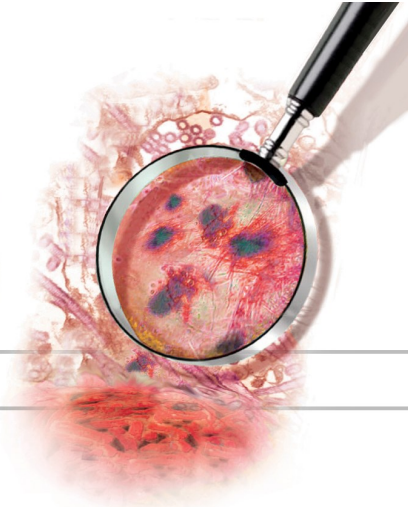

Upon completion of the treatment process, our Certified Technicians will take final tests throughout the home to make sure all levels are safe, providing you with the assurance that your home is protected against harmful bacteria and mold. Please realize that the EPA doesn't regulate household cleanliness, that's why Bactronix certifies their cleanliness through an official Warranty, Certificate and Bionomic Assessment Report. This warranty is transferable in case of a real estate transaction.

The slogan of Bactronix is honored and respected by thousands of satisfied customers because we are the best in: "Fighting The Invisible Enemy".

Commercial and Real Estate Highlights - February 2019

Success of Bactronix

The year 2018 has been a great year for Bactronix. Our growth of 69% is a clear indication that Bactronix is one of the most successful businesses in the Pittsburgh market area. Professionalism, honesty, quality and superior service have set us apart from all other mold testing and remediation companies.

Bactronix Certifies Icelandair!

Bactronix continues to pursue the biological health and safety issues associated with the airline industry.

You may have read the following published articles pointing out health risks while flying commercial aircraft:

NEW YORK POST – *Airplanes are more disgusting than you ever imagined.*

FOX NEWS – *The gross truth about germs and airplanes.*

CBS NEWS – *How risky are air travel germs?*

“Auburn University’s Department of Biological Services found the superbug Methicillin-resistant Staphylococcus Aureus (MRSA) among the concerning, deadly diseases that thrive on airplanes. According to the study, MRSA survived for up to seven days on the surfaces around your seat.”

Vice President A.J. traveled to Iceland to train 11 selected members of Icelandair on the unique disinfection and odor elimination technology of BactroKill. Each attendee received a “Bactronix Certificate of Training”. Icelandair is now certified and uses Bactronix products and equipment to disinfect and deodorize all their aircraft. Their mission is to be the most customer friendly and safest airline company in the world...and with Bactronix, they believe it is possible! At the present time Bactronix is working with other airline companies which are expected to sign agreements by the end of 2019.

11. We provide a home certification that is transferable to the buyer
12. We provide fast response to solve last minute home issues to prevent closing delays

Bactronix Testimonial

“We had an issue with mold in the HVAC system. The sales rep. did air quality tests and tested the inside duct system. The test results indicated that treatment was required. Alyjah the technician was so professional and competent. He was very pleasant and explained everything thoroughly. He is an employee for Bactronix to be proud of. I recommend Bactronix and would use this company again in the future.

K. Karsonus, Pittsburgh
